PROFILE

Aspiring student at Chitkara University with strong interests in machine learning, data analysis, and full-stack development. Experienced in building real-world projects using Python, Node.js, Django, and modern web technologies, with a focus on applying AI and physics-based models to practical problems. Skilled in C++, Java, UI/UX design, and backend development, with strong communication and problem-solving abilities.

PROJECTS

Food Ordering App

Django

- Developed a full-stack Food Ordering web application using Python, Django, HTML, CSS, JavaScript, and Bootstrap.
- Implemented secure user registration, login, and authentication using Django's built-in authentication system.
- Designed an intuitive interface for browsing food categories and restaurant offerings.
- Built dynamic shopping cart and order placement functionality with database integration using Django ORM.
- Developed responsive web pages following the Model-View-Template (MVT) architecture.
- Integrated the application with a separate customer ordering module (Phase II) to provide a complete food ordering experience.
- Utilized Git for version control and collaborative development.

Customer Food Ordering Module

Phase II

- Developed a dedicated Django application linked to the main Food Ordering system for managing customer food purchases.
- Designed a customer-friendly interface for browsing menus, selecting food items, and placing orders.
- Implemented shopping cart functionality with options to add, update, and remove items before checkout.
- Developed order confirmation and order management features for a seamless purchasing workflow.
- Integrated the module with the main application's authentication and database using Django ORM to maintain consistent user and order data.
- Built responsive frontend pages using HTML, CSS, Bootstrap, and JavaScript to enhance the user experience.
- Followed modular development practices to enable easy integration, maintenance, and future feature enhancements.
